

QA PORTFOLIO FINAL REPORT:

NAME: MUHAMMAD UZAIR SHAMSI

ROLE: SQA ENGINEER

1. Introduction

This document presents the Quality Assurance (QA) portfolio for testing a web-based application (Ticketwala.pk). The purpose of this portfolio is to demonstrate practical knowledge of software testing, including manual testing, automation, performance testing, security testing, and CI/CD integration.

2. Project Overview

The tested application is an online ticket booking platform. The system allows users to log in, browse events, and book tickets.

Modules Tested:

- Login System
- Dashboard
- Navigation
- Booking functionality

3. Testing Types Used

The following testing techniques were applied:

- Functional Testing
- Performance Testing
- Security Testing
- Compatibility Testing
- Automation Testing (Selenium)

4. Test Plan Summary

A structured test plan was created including:

- Testing objectives
- Scope of testing

- Tools used (Selenium, JMeter)
- Entry & Exit criteria
- Risk analysis

5. Test Cases Summary

Test cases were designed to validate system behavior.

Key components:

- Test Case ID
- Steps to execute
- Expected Result
- Actual Result
- Status (Pass/Fail)

Multiple scenarios such as login validation, navigation, and error handling were tested.

6. Bug Reports Summary

Several bugs were identified and documented.

Examples:

- Login error handling issue
- UI misalignment
- Slow response on dashboard

Each bug report includes:

- Steps to reproduce
- Expected vs Actual result
- Severity & Priority
- Screenshots

7. Performance Testing Results

Performance testing was conducted using **Apache JMeter**.

Key Metrics:

- Total Requests: 550
- Average Response Time: 600ms
- Error Rate: Low

- Throughput: Stable

Conclusion:

The system performs well under moderate load but may require optimization under heavy traffic.

8. Security Testing Results

Basic security testing was performed.

Tests Conducted:

- SQL Injection attempts
- Input validation
- Login security checks

Findings:

- No major vulnerabilities found
- Input validation needs improvement

9. Compatibility Testing

The system was tested across different environments.

Browsers Tested:

- Google Chrome
- Mozilla Firefox

Devices:

- Laptop
- Mobile

Result:

Application is mostly compatible but minor UI issues were observed on smaller screens.

10. CI/CD Workflow

The CI/CD pipeline for this project would work as follows:

1. Developer pushes code to GitHub
2. CI/CD tool (GitHub Actions) triggers automatically
3. Selenium automation tests execute
4. Test reports are generated

5. If tests pass → deployment proceeds
6. If tests fail → pipeline stops and issues are reported

11. Conclusion

This QA portfolio demonstrates the complete testing lifecycle, from planning to execution and reporting. It highlights practical skills in testing methodologies, automation, and DevOps integration, preparing for real-world QA roles.

SCREENSHOTS:

The screenshot shows the JMeter Summary Report window. The left sidebar lists the test plan structure: Test Plan, Thread Group, HTTP Request, View Results Tree, Summary Report (selected), and Graph Results. The main area displays the Summary Report for the selected HTTP Request. The report includes fields for Name, Comments, and options to write results to a file. Below this is a table with 11 columns: Label, # Samples, Average, Min, Max, Std. Dev., Error %, Throughput, Received KB/sec, Sent KB/sec, and Avg. Bytes. The table shows data for the HTTP Request and a TOTAL row. At the bottom, there are checkboxes for 'Include group name in label?', 'Save Table Data', and 'Save Table Header'.

Label	# Samples	Average	Min	Max	Std. Dev.	Error %	Throughput	Received KB/sec	Sent KB/sec	Avg. Bytes
	200	0	0	0	0.00	100.00%	16.9/sec	14.25	0.00	862.0
HTTP Request	350	1148	707	2340	296.36	0.00%	26.9/min	13.75	0.11	31417.0
TOTAL	550	730	0	2340	600.77	36.36%	40.9/min	13.53	0.10	20306.1
